

Andrew Lee

+1 (757)-940-8688 | Watertown, MA | andrewlee1@fas.harvard.edu | leeanddrew.github.io | linkedin.com/in/leeanddrew
Fully Authorized to Work in the U.S. No visa sponsorship needed

EDUCATION

Harvard University

Master of Science in Data Science

Cambridge, MA

Aug. 2025 – Dec. 2026 (Expected)

William and Mary

Bachelor of Science in Mathematics, Honors: Phi Beta Kappa

Williamsburg, VA

Aug. 2019 – May 2025

EXPERIENCE

Data Science Intern

E. & J. Gallo Winery

June 2025 – Aug. 2025

Modesto, CA

- Analyze data to transform into useful information to help make business decisions
- Data mining to identify patterns for predictive insights
- Organizing data using visualization
- Model structured and unstructured data for system integration

Product Management Intern

CIEE (Council on International Educational Exchange)

May 2022 – Aug. 2022

Seoul, South Korea

- Designed and launched 5+ study abroad programs for U.S. high school and university students, emphasizing cultural immersion and experiential learning
- Managed and maintained itineraries and student records for 400+ participants across independent programs, ensuring accuracy and consistency using Microsoft Office tools
- Analyzed student preference and attendance data to optimize program scheduling, cutting transportation downtime by 15% and reducing overall program costs by two million Korean won

PROJECTS

Counting Cranes Using Computer Vision | *PyTorch, OpenCV, MLOps* | [\[Code\]](#)

- Collaborated with U.S. Fish and Wildlife Service to develop deep learning models for counting migratory birds
- Trained YOLO-Family models on HPC infrastructure on 47,000+ imageries, achieving 5% average test error
- Built end-to-end MLOps workflow by packaging ML model in Docker and deploying to AWS Lambda via ECR and API Gateway
- Enabled weeks-long surveys to be completed in hours, accelerating policy decisions across conservation, hunting regulations, and funding allocations
- Presented research findings to the CEO of Conservation International and at multiple symposiums

Spatiotemporal Analysis of Wildfire Response | *R, Data Mining* | [\[Code\]](#) [\[Paper\]](#)

- Conducted original research to model public awareness and behavior in response to wildfire smoke by forecasting interest in 10 health-related keywords using Google Trends
- Collected and processed 5 years of wildfire, weather, and socioeconomic data across 12 California DMAs using Selenium for automated web scraping
- Built a Bayesian spatiotemporal distributed lag model, revealing a 14% rise in air pollution searches and 19% rise in air purifier interest within two weeks of elevated smoke PM2.5

Machine Learning in Hypersonics | *Scikit-Learn, TensorFlow* | [\[Code\]](#)

- Built supervised learning models – Linear Regression, Random Forest, Support Vector Machines – to predict Shock-Train Leading Edge (STLE) location in hypersonic vehicles using sparse pressure sensor data
- Engineered time-series features to reduce sensor noise and improve predictions, increasing R-squared from 0.79 to 0.89 and reducing MSE by 77%
- Trained deep neural network on only 7 of 37 experimental runs, successfully generalizing to 900K+ test data

World Happiness Score Visualization | *Tableau, Matplotlib, seaborn, Plotly* | [\[DashBoard\]](#)

- Built and deployed an interactive website visualizing global happiness trends using data from the World Happiness Report, combining Python (pandas) data wrangling, Tableau dashboards, and front-end tools
